

Dunkin' Campus Coffee Pricing Study

Survey Questionnaire — Full Question Set (10/8 Review)

Van Westendorp Price Sensitivity Meter + Gabor-Granger purchase-likelihood ladder, for both large hot coffee and large iced latte. 25 scored questions (+1 unscored intro/consent screen), built as two order-randomized form variants (coffee priced first / latte priced first) to reduce anchoring. MKT465 Simon Business School, University of Rochester — Dunkin' at River Campus.

Price ladders (grounded in verified on-campus competitor prices)

Product	Gabor-Granger ladder points	Anchors
Large hot coffee	\$3.00 · \$3.25 · \$3.50 · \$3.75 · \$4.00	\$3.25 = Starbucks (verified) · \$3.50 = Peet's (verified) · \$4.00 = Connections Café (verified)
Large iced latte	\$5.50 · \$6.00 · \$6.50 · \$7.00 · \$7.50 · \$8.00	\$6.00 = Peet's (verified) · \$6.49~\$6.50 = Starbucks (verified) · \$8.00 = Connections Café (verified)

Methodology, in brief: Van Westendorp's 4 open-ended price questions per product find the acceptable price *range* without presuming the right answer is a pre-chosen point. The Gabor-Granger matrix above complements that with a concrete, testable demand curve at specific price points. Whether Hot Coffee or Iced Latte is priced first is randomized across the two form variants, so the first-asked product doesn't anchor the second.

Section 1 — Intro & consent

Not a scored question — Forms intro page. “This short survey is part of a University of Rochester Simon Business School pricing study on campus coffee options. It takes about 7–8 minutes. Your responses are anonymous and used only in aggregate for academic purposes. By continuing, you agree to participate.”

Section 2 — Screener

Q#	Exact wording	Response format	Skip / display logic	Why it's asked	How analyzed
Q1	Are you currently a student, faculty, or staff member at the University of Rochester's River Campus?	Multiple choice: Yes / No	No → terminate (jump to thank-you page)	Confirms the respondent is in-population	Filter; excluded respondents not counted in n
Q2	Do you drink hot coffee or iced lattes at least occasionally (roughly once a month or more)?	Multiple choice: Yes / No	No → terminate	Confirms respondent is a category buyer — non-buyers can't meaningfully answer price questions	Filter

Section 3 — Coffee behavior

Q#	Exact wording	Response format	Skip / display logic	Why it's asked	How analyzed
Q3	In a typical week, how many cups of coffee or lattes (hot or iced) do you buy on or near campus?	Multiple choice: 0 / 1–2 / 3–5 / 6+	None	Category usage rate — heavier buyers may be less price-sensitive	Segment variable for cross-tabs
Q4	Where do you currently buy coffee or lattes most often?	Multiple choice: Starbucks (Wilson Commons) / Peet's Coffee (Wegmans Hall) / Connections Café / An off-campus coffee shop / I make my own / Other: ____	None	Identifies current competitor loyalty — the thing Dunkin' has to win share from	Segment variable; cross-tab against purchase intent
Q5	What do you typically spend on a large hot coffee, when you buy one?	Open numeric, \$ (validate \$0–\$15); option “N/A — I don't buy this”	None	Anchors respondent's real spending baseline before hypothetical pricing questions	Compares stated baseline to PSM/Gabor-Granger answers for internal consistency
Q6	What do you typically spend on a large iced latte, when you buy one?	Open numeric, \$ (validate \$0–\$15); option “N/A — I don't buy this”	None	Same, for latte	Same, for latte
Q7	Which do you buy more often — hot coffee or iced lattes?	Multiple choice: Mostly hot coffee / Mostly iced lattes / About equally / Neither	None	Lets the analysis weight each product's findings by actual relevance to the respondent	Segment variable

Section 4 — Price sensitivity: Product A (order randomized)

Form variant 1 shows Hot Coffee here; form variant 2 shows Iced Latte here. Section 5 is always whichever product Section 4 didn't cover.

Q#	Exact wording	Response format	Skip / display logic	Why it's asked	How analyzed
Q8	At what price would a large hot coffee from an on-campus Dunkin' be so cheap you'd start to question its quality?	Open numeric, \$ (validate \$0–\$15)	None	Van Westendorp “too cheap” threshold	PSM curve: too-cheap line
Q9	At what price would it be a bargain — a great buy for the money?	Open numeric, \$	None	Van Westendorp “bargain” threshold	PSM curve: bargain line
Q10	At what price would it start to seem expensive, though you'd still consider buying it?	Open numeric, \$	None	Van Westendorp “getting expensive” threshold	PSM curve: expensive line
Q11	At what price would it be so expensive you would not consider buying it?	Open numeric, \$	None	Van Westendorp “too expensive” threshold	PSM curve: too-expensive line
Q12	At each price below, how likely would you be to buy a large hot coffee from an on-campus Dunkin' instead of your usual option?	Matrix/grid: rows = \$3.00 / \$3.25 / \$3.50 / \$3.75 / \$4.00; columns = 5-pt scale (Very unlikely ... Very likely)	None	Gabor-Granger demand ladder	Purchase-likelihood-by-price curve → demand/revenue estimate

Section 5 — Price sensitivity: Product B

Whichever product Section 4 didn't cover.

Q#	Exact wording	Response format	Skip / display logic	Why it's asked	How analyzed
Q13	At what price would a large iced latte from an on-campus Dunkin' be so cheap you'd start to question its quality?	Open numeric, \$ (validate \$0–\$15)	None	PSM too-cheap	PSM curve
Q14	At what price would it be a bargain — a great buy for the money?	Open numeric, \$	None	PSM bargain	PSM curve
Q15	At what price would it start to seem expensive, though you'd still consider buying it?	Open numeric, \$	None	PSM expensive	PSM curve
Q16	At what price would it be so expensive you would not consider buying it?	Open numeric, \$	None	PSM too expensive	PSM curve
Q17	At each price below, how likely would you be to buy a large iced latte from an on-campus Dunkin' instead of your usual option?	Matrix/grid: rows = \$5.50 / \$6.00 / \$6.50 / \$7.00 / \$7.50 / \$8.00; columns = 5-pt scale (Very unlikely ... Very likely)	None	Gabor-Granger demand ladder	Purchase-likelihood-by-price curve

Section 6 — Purchase drivers & payment scenario

Q#	Exact wording	Response format	Skip / display logic	Why it's asked	How analyzed
Q18	How important is each of the following when you decide where to buy coffee on campus? — Price / Taste / Convenience (location & speed) / Brand reputation / Accepts my dining dollars or meal plan	Matrix/grid: 5 rows above; columns = 5-pt scale (Not at all important ... Extremely important)	None	Tests whether price is actually the deciding factor, or whether payment method / convenience dominates	Mean importance per driver; cross-tab "payment method" importance against dining-plan status (Q23)
Q19	University Dining Dollars currently work at Starbucks, Peet's, and Connections Café on campus. If an on-campus Dunkin' did not accept Dining Dollars or meal-plan swipes (cash/card only), how would that affect your likelihood of buying there?	5-pt scale: Much less likely ... No change	None	Elevated from a generic importance rating to a direct scenario test — the 9/24 competitive-landscape presentation confirmed (per UR Dining's own FAQ) that all three on-campus incumbents already accept Dining Dollars, making payment parity a concrete structural risk rather than a hypothetical one	Distribution of responses; cross-tab against Q23 dining-plan status

Section 7 — Attention check

Q#	Exact wording	Response format	Skip / display logic	Why it's asked	How analyzed
Q20	To show you're reading carefully, please select "Somewhat agree" for this question.	Multiple choice: Strongly disagree / Disagree / Neither agree nor disagree / Somewhat agree / Strongly agree	None	Data-quality check	Responses failing this are flagged/excluded before analysis

Section 8 — Demographics (last)

Q#	Exact wording	Response format	Skip / display logic	Why it's asked	How analyzed
Q21	What is your age?	Multiple choice: Under 18 / 18–20 / 21–23 / 24–26 / 27+	None	Segment variable; brackets rather than open numeric to reduce sensitivity and non-response	Cross-tab by age band
Q22	What is your status at the University?	Multiple choice: Undergraduate student / Graduate student / Staff / Faculty	None	Core segment — prior project work shows meal-plan/status is a decisive variable	Cross-tab
Q23	Do you have a University dining plan or dining dollars?	Multiple choice: Yes / No	None	Tests the payment-friction risk directly — whether Dunkin' must accept dining dollars to compete	Cross-tab against Q12/Q17 purchase likelihood, Q18 payment-method importance, and Q19 payment-scenario drop-off

Q#	Exact wording	Response format	Skip / display logic	Why it's asked	How analyzed
Q24	Which range best describes your typical monthly discretionary (non-essential) spending?	Multiple choice: \$0–\$50 / \$51–\$100 / \$101–\$200 / \$201+ / Prefer not to say	None	Budget proxy without asking income directly	Cross-tab; segments price sensitivity by spending power
Q25	What is your gender? (optional)	Multiple choice: Man / Woman / Non-binary / Prefer to self-describe: ____ / Prefer not to say	None, optional	Standard demographic, kept optional and non-presumptive	Cross-tab if sample size allows

25 questions total (+ 1 unscored intro/consent screen), open-numeric price questions capped at 8, estimated completion time 7–9 minutes.
